

Acknowledgments

This research was funded by parallel research cooperative agreements from both the National Park Service (NPS) and the U.S. Geological Survey to Natural Resources Ecology Lab (NREL), Colorado State University. An interdisciplinary team of NREL, USGS-BRD and Brigham Young University scientists conducted the work. This work could not have been completed without the cooperation, assistance, and hard work of many people from a variety of federal and state agencies, universities, and the general public. We particularly thank the many volunteers who arrived in the early morning hours to assist with elk census work in town and with the clipping of willows. These volunteers include a number of residents of the town of Estes Park.

The staff of Rocky Mountain National Park were full partners in this research and it could not have been successful without their assistance. We appreciate the support of Craig Axtell, former Chief of Resources Management, for his role in initiating and providing NPS funding support throughout the project. Therese Johnson, management biologist, coordinated the research with park staff, and oversaw all steps of the process--from study proposal to final report, as well as providing necessary advice and comments to all meetings and written reports. We appreciate the meticulous and insightful reviews of all the final reports provided by Ryan Monello, as well as his assistance in collecting crucial field measurements during the final stages of the research effort. Marsha Lutz was instrumental in coordination and supervision of National Park Service field crews throughout the first 4 years of the study, and had the tremendous responsibility of erecting the 16 study exclosures in a very short time span. Marsha also supervised and arranged logistical support for all of our volunteers. Mary Kay Watry coordinated and supervised the field crews during the final year of the study. Ron Thomas, GIS coordinator, processed all the GPS data, produced many of the map products, and provided advice and training to BRD and NPS field crews. Katy Sykes and Vivian Ridley were invaluable in arranging housing and logistical support, and organization of meetings. Joe Arnold, park engineer, spent several days of his time surveying and mapping the locations of hydrologic wells.

We were privileged to have the assistance of several international student volunteers. Lianne Schroeder, Luc Hoogenstein, Marcel Schrijvers, and Jeroen Gense traveled from Wageningen Agricultural University in

the Netherlands to work with us, while Maximilian Rouer and Nicholas Bethenod journeyed to the mountains of Colorado from the Institut National Agronomique in Paris, France.

Bonnie Koblitz, Martina Keil, Jennifer Williams, Marissa Howe, Vicki Steele, Scott Fussel, Anne Marie Goetz, and Laine Johnson volunteered their time and talents toward the beaver censuses, elk telemetry and censuses, and a host of other winter and summer field tasks. We would also like to recognize the work of a group of Americorps volunteers in their help building exclosures and installing check dams during the cold, wet spring of 1995.

Mike Gillespie of the USDA Snow Survey Office in Lakewood, Colorado provided the SNOTEL data. Steve Cordts, Dave Barnett, John Terenzi, Brian Dudek, Nicole Dudek, Dan Guevarra, Lynette Stevens, Paul Anliker, and Julie Thompson and a host of volunteers braved the winter winds of the park to create the simulated herbivory treatments. John Terenzi, Steve King, Bonnie Koblitz, Mary King, Paul Bacalis, Tina Otto, Tim Croissant, Stephanie Shoemaker, Carolyn Saino, Cheryl Arndt, Brian Dudek, Dan Guevarra, and Mary Brunelle collected field measurements.

A number of people, many residents and volunteers from the town of Estes Park, assisted with the ground counts of elk in town including: Joe Emmons, Steve King, Mary King, George and Helen Platt, Steve Prochaska, Ken Ogren, Jim and Joanna Turner, Larry Carpenter, Norman Carver, George and Dorothy Gibbs, Rob and Janet Ludlum, Jack and Virginia Cooper, Joyce Ware, Rusty and Linda LeNeve, Dayton Olsen, Laine Johnson, Lisa Foster, Ron Thomas, Jeff Connor, Larry Gamble, Dave Hunter, and Dave Neime. Mike Moses of USGS oversaw the data entries.

A number of scientists provided advice to the elk population estimation work in 1994 including: Edward O. Garton, Gary White, Dave Bowden, Gene Schoenveld, Steve Steinert, and Dave Freddy. Steve Steinert and Dave Yonkin of the Colorado Division of Wildlife provided many hours of invaluable fixed-wing aircraft radiotelemetry support that was critical to the town population estimates. We thank Ken Larkins, University of Northern Colorado, who provided elk locations from both aerial and ground radiotelemetry, mortality data, and assisted with the fixed wing surveys used for sightability model development.

Fred Bird, J. P. Mattingly, Pat Stephen, Doug Stephen, and Marsha Lutz carried out the prescribed burns. Paul Anliker, Brian Dudek, Menwelet Atsedu,

Allen Bradbury, Deb Bradbury, Ryan Martin, Cheryl Dandel, Julie Thompson, Patty Johnson, Ben Peterson, Dan Guevarra, Jennifer Williams, Nick Kraft, Matt Schenk, Mark van Dever, Holly Whitesides, Tricia Wotan, Adam Michels, Sigrid Resh, Kari Rigg, Sharon Yokell, Jason Hutchison, Caleb Huthmaker, Jim Heil, and Karla Brown processed laboratory samples, assisted with data entry, and aided when extra field hands were needed. Our thanks also to the administrative support staff at the Natural Resources Ecology Laboratory, Colorado State University, who helped provide much needed logistical, typing, administrative, and graphics support, especially Karen Bradley, Michelle Nelson, Laurie Richards, and Kay McElwain.

Finally, we would like to extend our deepest thanks and appreciation to the Technical Services staff at the Midcontinent Ecological Science Center, without whom we could never have produced this report. Jennifer Shoemaker oversaw all aspects of editing, graphics, and creating the print-ready versions. Dora Medellin not only spent countless hours formatting and typing, but also copy editing and providing technical advice. Dale Crawford created the beautiful illustrations that grace these pages. Jen, Dale, and Corinne Buffington all worked diligently at transforming our graphics to professional quality. Their dedication, hard work, and patience have been invaluable in producing this report.

13. ABSTRACT (Maximum 200 words) A research initiative was conducted 1994 to 1999 in Rocky Mountain National Park, Colorado by the U.S. Geological Survey and Natural Resources Ecology Laboratory (of Colorado State University) to evaluate the number, trends, and ecological effects of elk (<i>Cervus elaphus</i>) in the park and adjacent Estes Valley. This report consists of two sections (Empirical Findings and Modeling) and 12 chapters that detail the findings of this large and comprehensive research initiative.			
14. SUBJECT TERMS (Keywords) Elk, <i>Cervus elaphus</i> , national park management, natural regulation, ungulate herbivory.			15. NUMBER OF PAGES 268 pp

**U.S. Department of the Interior
U.S. Geological Survey**

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This responsibility includes fostering the sound use of our lands and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities.
